CAREER SUMMARY

I am an Information Technology Leader in data warehousing, client server application environments, and business intelligence with exceptional past performance in management and analytics. I have experience as a Lecturer II at Sinclair Community College where I lead a traditional face to face class in the Business Information Systems (BIS) and Computer Information Systems (CIS) departments.   My classes have utilized two different Learning Management Systems; Angel and D2L's Brightspace (called eLearn at Sinclair). Past projects include data systems development, data extract transform and load (ETL) projects, business data analytics and Information Systems project management. Using my skills and knowledge I have operated in many large environments such as General Electric, the U.S. Department of Veterans Affairs Administration, and the U.S. Air Force. My strengths include an ability to manage teams, a focus on quality education methods, and the ability to effectively work with diverse groups of people.
